Objective

Motivated computer science student seeking a part-time role in software to leverage my technical knowledge, strong communication skills, and passion for technology in delivering solutions to customers.

Education:

Bachelor of Computer Science

[UTS], [Sydney, Ultimo]
2024 – Present

- **Key coursework:** Completed Database Fundamentals, Introduction to Information Systems, Business Requirements Modelling, Communications for IT Professionals, Programming 1 & 2 (r, java, python, SQL, react and react native).

Skills:

- **Programming Languages:** Programming in java, python, r, react and SQL
- **Technical Skills:** database design, data base modelling and system modelling
- **Sales/Communication:** Customer service, persuasive communication, problem-solving, active listening
- **Tools:** Microsoft Office, Excel and Git

Experience:

Retail Sales Associate

[Universal Store, Hype DC, Cotton-On], [Sydney, NSW]
Nov/2020 – October/2024

- Interacted with customers to understand their needs and recommend products or services.
- Handled queries and resolved issues, maintaining a high level of customer satisfaction.
- Achieved [KPI targets, sign ups, and customer relations].

Tech Projects:

[Game System], [python & java]

Completed a multi-part programming project in Java and Python to develop 'Sleuth,' a command-line game system. Demonstrated skills in object-oriented programming, gameplay mechanics, interface design, exception handling, and performance optimization, progressively integrating complex components into a cohesive, interactive game.

[Data Base Modelling & Design], [SQL]

Designed a conceptual and logical database for a small-to-medium enterprise, focusing on data requirements analysis, business rule definition, and data normalization to ensure efficiency and consistency, culminating in a detailed ERD and professional documentation.

[Business Requirements Analysis Report]

Developed a conceptual data model for a book retailing system, focusing on streamlining inventory management, improving customer experience, and reducing staff workload through database optimization and automation.

[Engineers Without Borders Challenge]

Collaborated on the Engineers Without Borders (EWB) Challenge to design a sustainable waste management solution for the Torres Strait Regional Council, focusing on community engagement, local resources, and long-term viability through comprehensive research, detailed design, and implementation planning.

Achievements:

- Runner Up Winner for the Engineers Without Borders Challenge
